

E/M Auditing and Education

Targeted Approach to Uncover Vulnerabilities

Background

Guiding principles for 2021 E/M changes are to:

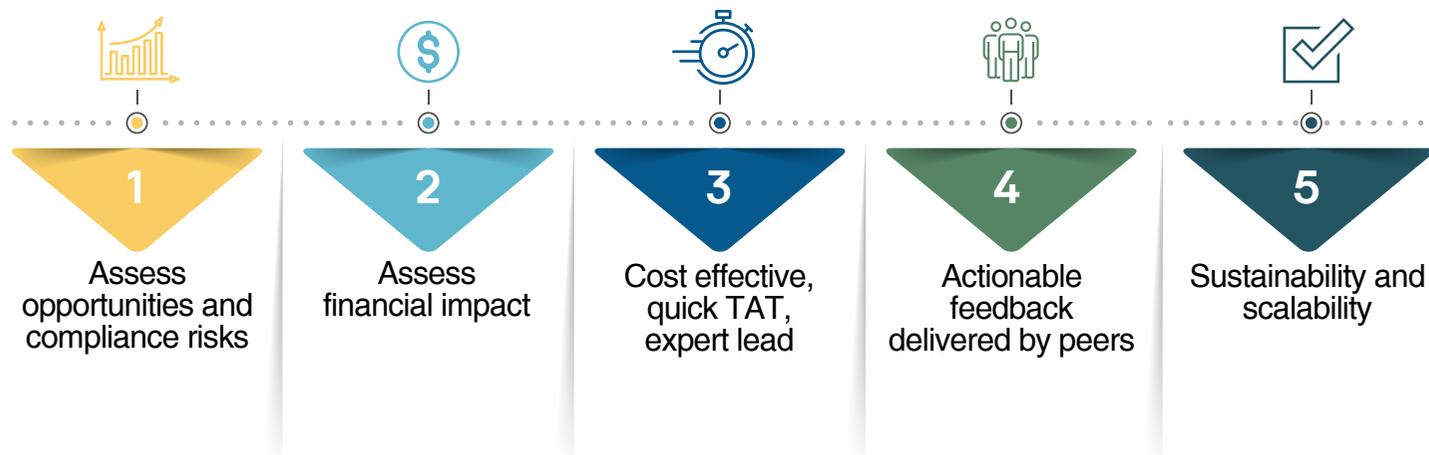

- Minimize provider burden as it relates to coding and documentation
- Ensure accuracy of E/M payments on a resource base perspective
- Expand on definitions and guidelines
- Reduce significant errors

Financial Implications

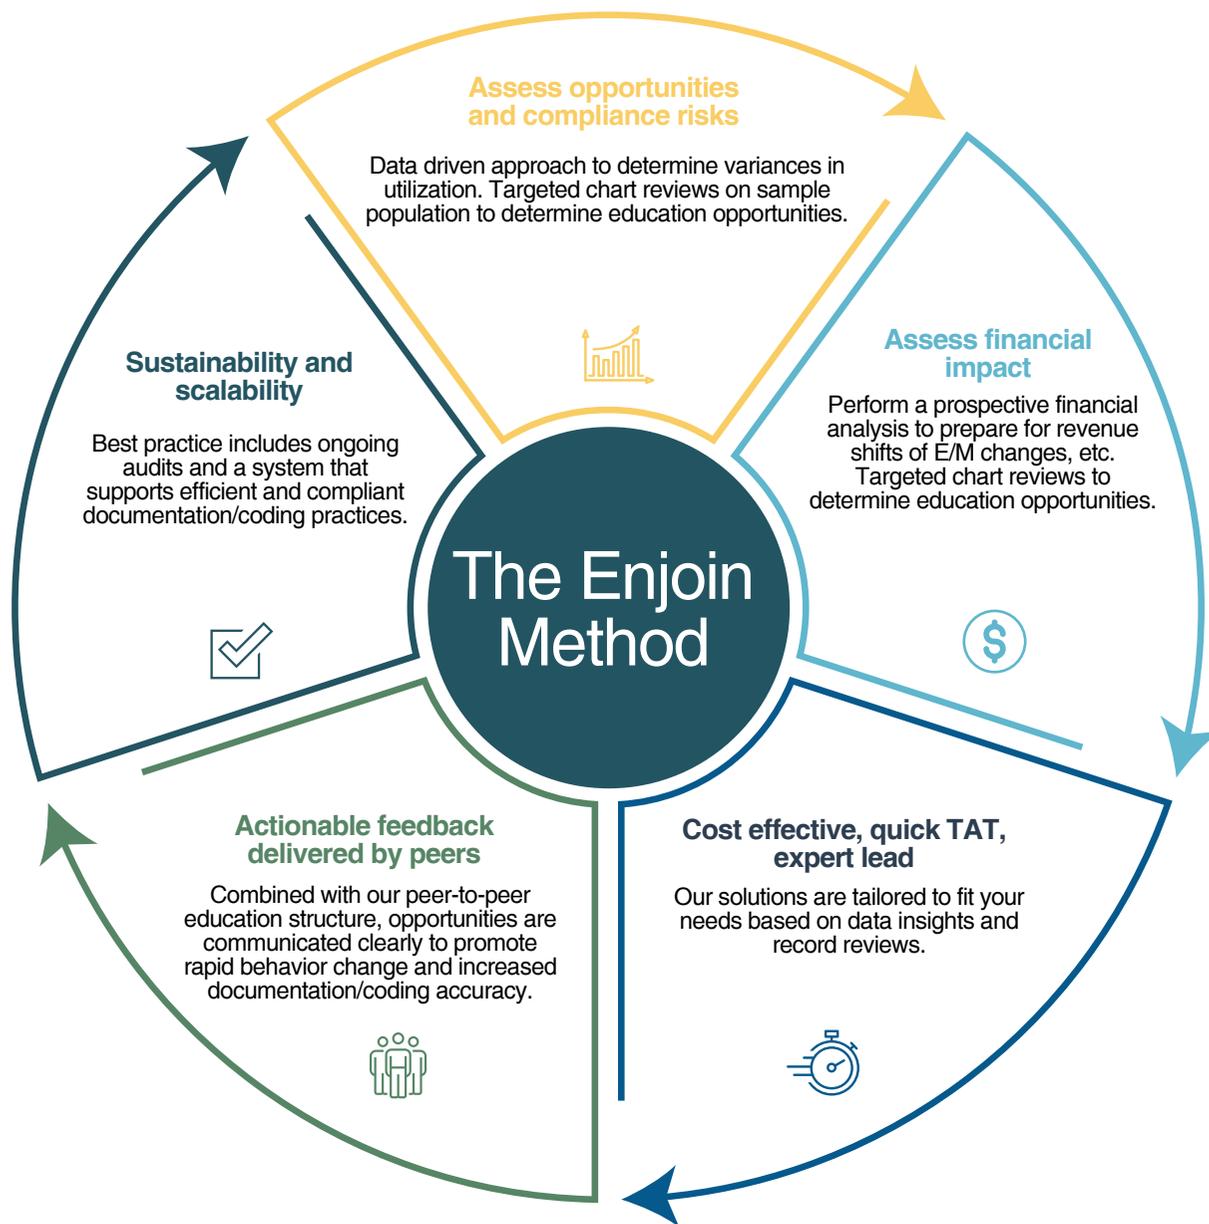

These changes to the current reimbursement structure could potentially have a significant impact on medical practices' revenue. Improper payments for office-based E/M codes are projected to reach approximately \$1.4 billion.

With over 200 years of collective provider experience, Enjoin continues to set the benchmark with expertise in value based care and risk adjustment models to ensure appropriate translation of care. We help clients unite documentation and coding across the continuum.
